

# Ways For 10-Year-Olds To Have Fun And Learn

## UNO

A child-friendly game of cards, UNO requires children to use their cognitive thinking to make their moves and helps them become socially interactive.

## Mapping Quiz

Buy a map poster and paste it on your child's bedroom wall. Now ask questions about different places and let them answer by pointing to the place on the map.

## Science Experiments

Help them in creating a DIY experiment and learn the beauty of science. It can be testing if eggs float in salt water or fashioning a parachute out of a plastic bag.

## Family Talent Show

Host a talent show at home and let them invite their friends too. Each one can take turns showcasing their talents. Reward them with prizes they'll love.

## 3D Sculptures

Encourage your children to create 3D art with cardboard, tape, toothpicks, and colors. They can make anything of their choice, such as a bird, house, tree, or flower.
