

# Preventive Measures For Diaper Rash In Babies

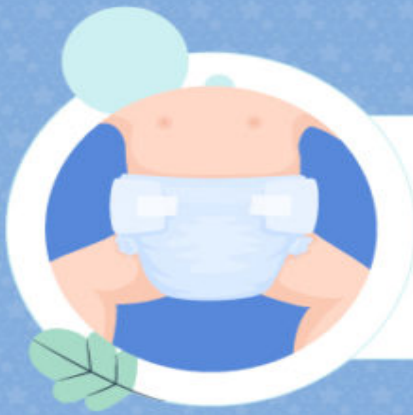

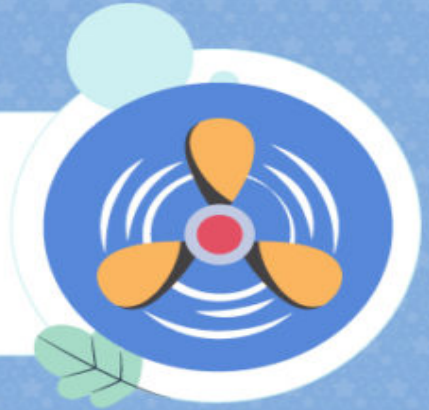

Change baby's diapers frequently and as needed.

Clean the diaper area with lukewarm water, baby wipes, or clean washcloths.

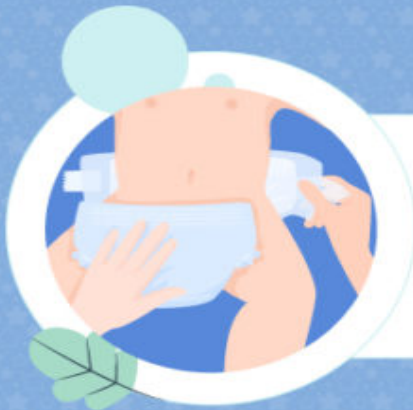

Avoid using fragrant or alcohol-containing baby wipes.

After cleaning, pat dry or air dry the diaper area before putting on a new diaper.

Use age-appropriate diaper size; avoid over-tightened or extremely loose diapers.

Allow your baby to have diaper-free time each day.

Apply diaper creams and choose high-absorbent diapers.

Wash your hands before and after a diaper change to prevent rash spread.
