

Other Types Of Breathing Sounds In Babies

Rales

If you hear bubbling or rattling sounds when your baby inhales, it could be due to the opening of closed spaces in the lungs when air is breathed in.

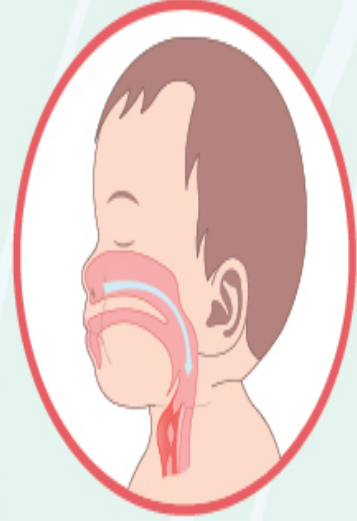

Rhonchi

A coarse sound resembling snoring may be caused by airflow constricted in the large airways.

Stridor

Sounding similar to wheezing, stridor sound comes only from the upper airways and not from the lower airways, like in the case of wheezing.

Stertor

A common sound, sterter sounds like snoring but is caused by congestion in the mouth and nose.
