

Different Kinds Of Foot Warmers

1 Battery-operated:

These are portable foot socks or insoles which work on a battery. They work on rechargeable or non-rechargeable batteries.

2 Disposable:

These warmers are air-activated and provide warmth to toes and feet. Such insoles can be used for multiple hours.

3 Heating pads:

Generating heat electrically, these warmers typically look like a sack where you can slip your feet inside and plug the device into the socket.

4 Heating packs:

Suitable for traveling, these packs often come in pairs for each foot. They generate heat when the pack is shaken, as the ingredients are mixed to generate heat.
