

Buying Guide For A BEAN BAG FILLERS

Material

Fillers are available in different materials, including EPS beads, compressed foam, natural fillers, and microbeads. You may select one as per your need.

Ergonomics

Impact-resistant and recyclable fillers are less likely to compress over time and may be a good option.

Form

Compressed memory foam not only fills your bean bags but can also be used in pillows, cushions, and stuffed toys, offering versatility.

Size and Amount

Make sure you take fillers based on the size of your bean bags. Shredded foam fillers may conform better, while styrofoam is more lightweight and rigid.
