

Major Features To Look For In A Heater

Size: Choose a heater that is appropriately sized for the space you want to heat.

Heat output: Look for a heater with a high heat output, measured in BTUs (British Thermal Units). This will ensure that the heater can effectively heat the space.

Energy efficiency: Choose an energy-efficient heater to save money on your bills.

Control options: Consider the type of control options, such as a thermostat or a timer, to give you more control over the temperature in your space.

Safety features: Look for automatic shut-off or tip-over protection to prevent accidents.

Noise level: If you plan to use the heater in a bedroom or space where noise could be an issue, look for something that operates quietly.

Maintenance: Look for an easy-to-clean and maintain heater with removable and washable filters or a self-cleaning function.

Portability: If you need a heater that can be moved from room to room, consider one with built-in handles or wheels for easy transport.
