

Why Is A CBC Test Important During Pregnancy?

- The CBC test is an easy way to detect blood-related problems such as anemia. The test measures the following attributes of blood.

Hemoglobin content

Protein in the red blood cells is responsible for carrying oxygen to various tissues.

Haematocrit of packed cell volume

A measurement of the amount of red blood cells present in your blood.

Blood platelets

Show the efficiency of blood clotting.

White blood cells

Help detect the presence of infections.

Mean corpuscular volume (MCV)

A measure of the average size of the red blood cells.
