

TESTING FOR PREGNANCY

WITH SUGAR:

THINGS TO KNOW

The sugar pregnancy test is easy on your pocket and to perform.

You don't need additional scientific knowledge to interpret the test results.

The test could be done at any time of the day, but preferably in the morning.

Make sure to use pure, unadulterated, and granulated sugar for testing.

The test results depend on multiple factors, including environmental and hygiene factors.

Since the test is not scientifically validated, you must confirm with a legitimate pregnancy test for accurate results.
