

# Fascinating Information About Lobsters For Children

Lobsters are nocturnal creatures, meaning they are more active at night.

The heaviest lobster to date weighed 45 pounds.

They are usually colorless and attain a bluish color when exposed to oxygen.

They can regrow their body parts, such as limbs and antennae.

Their teeth are present in their stomach and are a part of a system called the gastric mill.

The females can lay between 5,000 to more than 100,000 eggs.
